Jim Cuming Has Chev. Stolen

Taken from its parking place on Main Street Saturday night, by some party unknown, James Cumming's automobile was recovered in Calgary by the City Police, and restored to Mr. Cumming Sunday.

Last Saturday night, around about the time all good farmers feel it is time to go home, Jim Cuming and his neighbour, Ira Heywood, found that Jim's car was missing from its parking space on main street.

Placing the matter in the hands of the police, it was found some time later reposing in a Calgary public garage.

The borrowing party had left the car there to have some work done on it, at the same time touching the garage for a few dollars until he called back for the car. In the car was a gun belonging to Jim Cuming, and groceries that Ira Heywood bought.

Removing these from the car, he had the garageman drive him to a certain address in Calgary.

Shortly afterwards, the police investigated, and the Garage took them to the address where they had left the party whom they presumed to be the owner, but it was too late, the Bird had flown the Coup.

Jim had the car restored to him on Sunday, minus gun and groceries.

C.D.S. Entertains A Departing Member

On Tuesday evening last, at the Masonic Hall, the C.D.S. entertained at a social hour in compliment to their departing member, James McClelland. Only C.D.S. members took part, together with a few of James' intimate friends.

Contests, Klondyke and Dancing filled the programme, and so much did all enjoy themselves that the parting hour came round all too quickly.

During the supper interval Mr. McLean, on behalf of the C.D.S. and other friends, presented the guest of honour with a Military hair brush set and a Baby Brownie Camera. James suitably replied.

The hi-lite of the evening was Radio Announcers contest. The company was split up into groups, each selecting a lady and gentleman to represent them. The Judges verdict gave Miss L. Michel (East) first place for the Ladies and James McClelland (Town) first place for the men. Several of the ladies, who spoke over the Mike, would make handsome addition to some of the big Radio Stations, as announcers.

Guest winners were:
Klondyke, Mary Murdoch and Dr. McClelland.
Contest 1, (a) Marion Ingham and Ken McCrae,
(b) Edith Seville and Dr. McClelland.
2, Wilda McTavish and Evan Gordon.
3, Marion Ingham and Ken McCrae.

All in all it was a pleasant evening, and great credit goes to the two young ladies responsible for the Miss Margaret Murdoch and Miss Edith Seville, with the odd pat on the back to the henchman in the background.

Dance music was supplied by H. A. Bannister, which added greatly to the evening's entertainment.

Cream Shippers Please Note.

The attention of Cream Shippers is drawn to the new train schedules effective on and after Sunday, September 27. It will be noticed that the noon train now leaves at 12:23 instead of 12:23 as heretofore. This means a departure of one hour and ten minutes earlier, so be advised and keep this change of time prominently before you at all times.

Self-control is strength.

SPEEDY RECOVERY WISHED

The many friends of Fred Stevens will regret to learn that Fred is at present a patient in the Holy Cross Hospital. Fred has not been feeling any too good lately and went to Calgary last Thursday.

It is the sincere wish of all of us that Fred will soon be back on old Broadway. It's not the same with his cheery countenance missing and the staff of the Chronicle miss his daily visit and wisecracks.

Best wishes, Fred, for a speedy recovery.

SOUTHBOUND
12:05 noon and 5:20 p.m.

A PREACHERS HARD LOT

Never Does Anything to Please Some of His People

A preacher has a hard time. If his hair is white he is too old. If he is a young man he hasn't any experience. If he has ten children, he has too many. If he has none, he should have and isn't showing a good example. If his wife sings in the choir she is presuming. If she doesn't she dislikes her husband's work. If a preacher reads his notes he is a bore. If he speaks extemporaneously he isn't deep enough. If he stays at home to study, he doesn't mix with the people. If he is seen around on the streets, he ought to be at home getting up a sermon. If he calls at the home of the poor, he is playing to the grandstand. If he calls at the home of the rich, he is an aristocrat. Whatever he does someone could have told him how to do it better. Next to being an editor it is an awful life. Brampton Conservator.

Crossfield Amateur Night

Since the idea was mooted, good response has been received, so much so, that the date of the entertainment has been set, i.e. October 16, 1:30, in the U.F.A. Hall.

To date many entries have been received, but it has been thought that sufficient time was not allowed so the Committee in charge have extended the entry date until October 3.

We would like to see some more entries from the west, so come on now folks, let's have them, do it today, cut and detach the entry blank, fill out and mail.

Prices of admission to the entertainment will, in all probability, be, Adults 35c, Students 25c and Children 15c.

Make this night a real one, come out and boost for your friends. The audience will be the Judges and your applause recorded on an applause meter.

Cash prizes will be awarded, and a Public Address System used.

Instrumental, Vocal, Quartettes, Duets, Readings, this is the summary of entries received to date, and granted the support of the public, a good night's entertainment is promised.

Complete details have not been fully worked out, but it is anticipated that a social dance will follow the entertainment.

Watch for the posters next week.

CONGRATULATIONS

Congratulations are extended this week to Mr. and Mrs. J. H. O'Neil, who celebrated their 54th wedding anniversary on Wednesday, September 16th.

Both are hale and hearty, and enjoying life, and may they be spared many more years together.

"Lord of the steadfast will,
Whose vision clear
Saw all the travail of the years,
Beyond which lies the world to be
That knows no human wrath or tears—
Help us to see with eyes unsealed
Thy harvest that the years shall yield
Their daughter, Mrs. F. Ruddy, entertained them at dinner.

THE ENQUIRING REPORTER SAYS:

Monday morning the station platform was crowded with citizens of this community who had assembled to witness the arrival of the new C.P.R. Streamline Train. In fact as one looked at the crowd, the thought that was uppermost, "Is Crossfield a Village or Town," that is if one was to judge by the dense throng that was on view.

Steaming smartly into the station "The Chinook" made a big impression on the sightseers. The train is different in every way from the standard passenger train on this line, its make up of four coaches, its streamlined engine, its handsome colouring and its quick stopping and getaway mark a new era in railway transportation.

It enters the service proper on Sunday the 27th.

The new train schedules will be found on page eight and column three of this issue.

In Memoriam

In loving memory of L. Louise Scholefield who passed away September 28, 1934.

"Time does not rob us of thy nearness,
It binds us closer to thy dear-ness."
Remembered by her husband and son.

APOLOGY

In our column last week, we omitted the name of Alfred Stevens on two occasions, and we apologise in this connection.

To miss once is bad, but when the reporter misses twice on the same name, it's a calamity, however, mistakes happen with the best of us.

A. Stevens was a member of the E. Bils hunting party, and his name should also have been shown as a member of the Business Committee of the Crossfield Dramatic Society.

Elevator Competition

The business of handling Western grain is not only the most highly regulated but also the most competitive business in Canada.

All country elevators, whether Line elevators or Pool, compete for business. Competition is as keen amongst Line elevators as it is between Line and Pool elevators. The service given by elevator companies is honest and efficient, as it must necessarily be.

The Alberta Pool advertisements refer to their competitors as a "family compact." There is not and never has been any "family compact" among grain companies any more than there is between Line and Pool elevators.

It is the habit of the Pools in their advertising for competitive business to claim credit for every improvement in agricultural conditions and to blame their competitors for the burdens that remain, whether they arise from world conditions, national conditions or geographical conditions, for which the Line companies are no more responsible than the Pools. Their claim is untrue and unfair.

The Line elevators are as keenly interested as any other organization in a good price for the farmer, in his prosperity and in the improvement of the external and internal conditions that affect his welfare.

LOCAL LINE ELEVATORS

YOU can cut Dixie coarse or flakey just as you like it. It's economical, too, for you cut it only as you use it—there's no waste.

DIXIE PLUG SMOKING TOBACCO

Requisites For Safe Driving

The summer just passed has produced the usual crop of automobile accidents to drivers and passengers in the three prairie provinces. The daily newspapers have duly recorded numerous accidents together with the names of killed and injured and, when the information was available, the causes of these frequent disasters.

It is yet too early to record figures detailing the number of accidents and the toll of death and injured. These will be available later, but indications are that there will be little, if any, reduction below the 1935 record, despite the safety first campaigns which have been waged by governmental authorities, automobile clubs and commercial organizations interested in the subject, through the public press, over the air and through motion picture presentation.

It does not necessarily follow that such campaigns are a failure, but it seems to indicate that public memory is short lived or that the capacity of automobile drivers to avoid accident, no matter how well-intentioned or how careful they may be, is below par. The latter is probably a close approach to correct diagnosis of the ailment.

Statisticians and experts working on figures and available data on the causes of automobile accidents in the United States last year came to the conclusion that the number of accidents arising from defective equipment or faulty mechanics is comparatively insignificant, from which it follows that the human element, the capacity and capability of the driver, is in the majority of cases, the factor mainly responsible for disasters on the highways.

In other words, a large percentage of automobile accidents, can be reasonably attributed to lack of training or lack of experience on the part of the driver and perhaps in many cases, a combination of the two. The statement does not take into account accidents which can be charged up against recklessness, alcoholism or criminal negligence.

Undoubtedly lack of training and lack of experience are the causes of a number of crashes and the opinion is gaining ground that a substantial percentage of accidents is caused by drivers who are ordinarily careful but who have not had sufficient experience to sense danger in time to avoid it or who, sensing a pending risk, are not skilful enough to resort to the proper course to follow in time to prevent disaster.

In view of these conclusions there is much to be said for the adoption of courses of training for those who intend to operate powerful and speedy motor vehicles over the highways. This might be followed by examination of applicants for operators' licenses for the first time, though it would not be feasible to insist on making such tests the sine qua non for the right to drive for those who have previously been granted licenses. Courses of such a nature, if properly carried out by competent persons would at least partially, if not completely, take care of lack of training.

As for accidents caused by lack of experience, these can only be overcome by experience, supplemented by instruction. That drivers can and do develop a form of road sense which warns them of impending danger is the testimony of Oliver Stewart, writing in a recent issue of The Observer of London, England, where the mounting accident toll is causing grave concern.

The writer explains that in course of time a driver learns to interpret small signs which to a novice would pass unheeded. "A driver on a main road about to pass the entrance to a side road, suddenly slows down. No other vehicle is visible; yet as he reaches the side turning, a motor bicycle comes out of it and turns into the main road. If the driver is questioned as to the reason he slowed down before any other vehicle was visible, he will probably say: 'It's intuition.'"

To Mr. Stewart that is not altogether a satisfactory explanation. He pointed out that in all probability the driver unconsciously registered some small sign that something was coming down the side road, a pedestrian turning his head in that direction or a flock of sparrows taking to flight from the ground or some other indicator.

"The swift interpretation of such things," says Mr. Stewart, "is road sense and it is acquired with practice; but it is much too rarely taught. At first the signs will be seen, but not interpreted; and, in the absence of specific instruction, it is only with long practice that the interpretation can be expected to come without delay."

May Increase Duty

Britain Likely To Get Revenue From Foreign-Made Flags

Foreign-made flags, pictures of the King and other articles suitable for the coronation may be subjected to higher import duties.

Increases are being considered on articles for use in or commemorating the coronation, or as souvenirs, which have a representation of the King or any member of the royal family, any royal emblem, or bear a flag of any country in the British Empire, or are in any way suitable for the coronation.

Papa (to Johnny, four years old): "Won't you have another piece of duck, Johnny?"

Johnny: "Yes, please, father, I will, duck's my favorite chicken 'cept turkey."

Producing New Paper

Russian Scientists Claim It Will Last 1,000 Years

A new brand of paper—so strong that it will "last 1,000 years"—has been invented by scientists at the Leningrad laboratory of preservation and restoration of documents, it is claimed.

The formula for the paper was discovered as a result of studying Egyptian and other ancient kinds of paper.

According to the director of the laboratory, Professor Tikhonov, production of the new paper will cost no more than the manufacture of ordinary paper.

An improvement in the gear wheels of dial telephones now permits them to live through 5,000,000 operations instead of 100,000 as formerly.

Houses Strange Collection

Many Interesting Curios To Be Seen In Private Museum

Charles Q. Eldredge, veteran world traveler who has celebrated his 91st birthday, is the sole owner and curator of the Eldredge free museum at Old Mystic, Connecticut, which boasts of more than 7,000 items collected in the last 81 years.

Early in life Eldredge developed a mania for collecting things, and in 1917 he erected a separate building for his trophies and opened his free museum. Since that time, more than 60,000 persons have viewed the collection, while Eldredge himself has personally conducted 25,612 persons through the building.

The collector is as fond of entertaining as he is of collecting curios. He displayed his love of entertaining friends in 1891 when he returned to Old Mystic after engaging in the building business for 20 years, and built a large recreational center which he called Riverview. Hundreds of guests from Connecticut and neighboring states have used his bowling alleys, shooting galleries and other amusements.

The museum houses as strange a collection as has ever been assembled. In front of it rests the bleached skeleton of a whale, 90 feet long, the gift of Capt. John C. Spicer of Groton, Conn., who caught it in Hudson Bay in 1878.

An enormous penguin greets the visitor just inside the door. It came from Cape Horn and the card around its neck is typical of the labels Mr. Eldredge has placed on the exhibits. The card reads: "I am sure that you folks, like me, are close readers of the Bible, so you will remember that somewhere it tells about those who have ears and hear not and eyes and see not. Well, here is a bird which has wings and flies not."

Eldredge takes more pride in his souvenirs than in his natural history collection. He has what he believes is the first cannon ball fired against Fort Sumter, and he says that Edmund Ruffin, the fellow who fired that shot, also fired the last shot of the civil war. When he heard that Lee had surrendered he shot himself through the head.

Some of his other prize items are a petrified cocoon, which, he says, dates from 437 A.D. and was found during the digging of the Panama canal; a ship model built in a bottle and which won the world prize for that sort of thing in 1934; a petrified oyster weighing eight and one-half pounds which was found in South Africa in 1865; a piece of wood from the Confederate gunboat Merrimack; some wooden hinges used on a barn door for more than 200 years; an almost complete set of all commemorative coins issued by states or the federal government, and several thousand rare postage stamps.

For Brighter Silver

Potato Water Is Said To Give It Extra Sparkle

Few people know that if silver is polished while it is hot the work is halved and the resulting brightness doubled! It is worth while to plan your washing up with this end in view. Leave the silver forks, spoons, teapots and cream jug to the last, pour a little fresh hot water into the basin and wash up the silver, drying it before it has a chance to cool down. Another queer and little known tip for silver is this: To give an extra sparkle for a special dinner party, soak it for a moment in the water that the potatoes were boiled in. Dry it while still hot and the result will be amazing.

SELECTED RECIPES

DATE MUFFINS

- 1 cup shortening
- 2 cups flour
- 3 teaspoons Magic Baking Powder
- 1/2 teaspoon salt
- 1 cup milk
- 1 cup dates, pitted and chopped.
- Cream shortening, add beaten egg, flour in which baking powder and salt have been sifted, and milk. Add dates. Bake about 25 minutes in greased gem pans in moderate oven at 400 degrees F.
- For sweet muffins sift 1/2 cup sugar with dry ingredients.

Teacher—"Johnny, you must bring a written excuse for being absent yesterday, from the head of your family."

Johnny—"She's away on a fortnight's holiday, ma'am; shall I bring one from me father?"

Pupils in Scotland have to get through about three times as many books, in the school year, as do London school children.

Great Britain is standardizing all brass foundry products.

Women In Banking

Few, If Any, Hold Positions Of Responsibility In Canada

Very few, if any, Canadian women, hold positions of responsibility with the banks. It is a field in which thus far the mere male has been able to stave off the feminine onslaught into the business world.

But in the United States, the number of lady bankers is sufficiently great to warrant an association of their own—the Association of Bank Women. This group will convene about the middle of October, just before the convention of the American Bankers Association.

Officers held by members of the fair sex included in the association's roster run the entire gamut of the banking profession from president down. Included are presidents, vice-presidents, cashiers, trust officers, statisticians, directors, branch managers, and managers of departments such as exchange, collection, publicity, savings.

Sees Better Times

Secretary Of League Of Nations Paints Optimistic Picture

The turning-point in a world industrial depression has been passed, an official League of Nations report declared.

The report, prepared by the secretary, Joseph A. C. Avenol, presents an optimistic picture and says despite political clouds the task of solving outstanding international economic problems has become easier, and the solution would help to dissipate political apprehension.

Avenol in the report attributed the failure of agriculture to share fully in the general improvement, to the protection of agriculture in the industrial countries.

Officials said the league's economic committee favors discussions among the powers as soon as political conditions permit.

Taking More Medicine

The growing consumption of medicine in England is worrying Sir Kingsley Wood, minister of health. "We are rapidly becoming a nation of medicine drinkers," he said in a speech to the House of Commons. The cost of medicine per head in England, he said, is double that in Scotland.

FRENCH PREMIER IN LIVELY DEFENCE OF DEMOCRACY

Paris.—Premier Leon Blum delivered a vigorous defence of democratic forms of government as France's "answer" to the anti-democratic speeches of Chancellor Hitler at the Nuremberg convention.

"The world's democracies," the Socialist premier said, "during the last century showed at least as much stability" as dictatorships even when the dictator was "genius."

"France does not pretend to impose on other governments the principles of governing which it finds wisest and most just," he said. "France rejects entirely the idea of a war of propaganda or a war of reprisals."

"It wishes to live in peace with all nations of the world, whatever their domestic regime."

"Defending the revolutionary principle of government, the Socialist premier said:

"Without the civil equality proclaimed by the French revolution, the authoritative states of Europe would not have at their heads men who come out of the depths of the people and draw from this origin their merit and their pride."

(Hitler is the son of an obscure customs official; Premier Mussolini of Italy is the son of a blacksmith.)

His speech was broadcast in French. It was translated into English, German, Italian and Spanish and rebroadcast from stations nearest those countries.

France is divided by conflicting doctrines of political parties, he said, but in time of danger would be united "to defend her soil."

"There are in France doctrines and parties which clash. France sees that as a principle of force and not of weakness."

"But as France is unanimous in her wish for peace, so will she be unanimous tomorrow . . . If it is a question of preserving the security of the fatherland, even more so to defend her own soil."

Blum appealed for a halt of the European arms race and reaffirmed France's faith in the principles of the League of Nations.

"Peace, he declared, is 'indivisible,' and cannot be maintained solely by an armed bloc."

Turning to the Spanish civil war, in which his government has proclaimed strict neutrality, the premier said:

"The causes of the war which weigh on the world are already too heavy for France to aggravate them by the design of a political crusade, whether it be for the ideas it thinks just and good, or against the systems it believes false or bad."

"France shall stand unanimously firm against any pressure, or any threats against the independence of her conduct, full liberty of decisions, and choices."

"France wants to coerce no one."

Import More Wheat

Report Says U.S. To Be On An Import Basis This Year

New York.—A Washington correspondent of the New York Herald Tribune reports that department of commerce and bureau of agriculture estimates indicate the United States will import more wheat in 1933 than in any previous year in the country's history, and four times as much as was ever imported in a single year before 1934.

The correspondent says that while the nation will consume about 42,500,000 bushels of foreign wheat, it will export only about 500,000 bushels, he adds:

"This year will, therefore, bring to a sharp climax the United States movement from a wheat export to a wheat import basis, accomplished in the last three years. Simultaneously an unpublished estimate by one group of department of agriculture experts showed pretty clearly that without the A.A.A.'s crop reduction policy the movement might never have occurred."

Must Carry Wireless

New Order For Lake Boats Has Been Issued

Ottawa.—All freighters on the Great Lakes of over 5,000 gross tonnage and plying between ports more than 200 miles apart will be required to carry radio-telegraph equipment and a competent operator from September 20 to the close of navigation. It was announced by Transport Minister C. D. Howe.

The minister announced the order had been issued under provisions of the new Canada Shipping Act.

Our Power Resources

Estimated Canada Could Supply 45,000,000 Horsepower

Ottawa.—Canada is the possessor of widely-distributed water power resources which it is estimated would supply a turbine installation of 43,000,000 horsepower, Hon. C. D. Howe, minister of transport told delegates at the world power conference here.

At present only about 8,000,000 horsepower is being produced, which is less than one-half of the United States and exceeds that of Italy by 2,000,000 horsepower, he said. On a per capita basis Canada with an installation of 722 horsepower per 1,000 population, comes second only to Norway.

Mr. Howe presided at a dinner given by the government of Canada to approximately 300 delegates representing more than 30 different countries of the world. The delegates came to Ottawa in the course of a "study tour" which followed the world power conference at Washington last week. At the conclusion of the dinner, the entire party enained for Niagara Falls, where they are scheduled to stop over before going to the United States.

In a brief reference to the St. Lawrence power, Mr. Howe said in the purely Canadian section of the river above Montreal, potential hydraulic resources were estimated at 2,000,000 horsepower. In the international rapids sections of the river it would be possible to obtain an output of another 2,000,000 horsepower. This would be divided equally between Canada and the United States.

Reorganize Militia

Would Modernize Dominion's Defence Forces To Bring Them Up-To-Date

Toronto.—Hon. Ian Mackenzie, minister of national defence, informed the board of control that the main object of the proposed reorganization of Canada's non-permanent active militia was to modernize the Dominion's defence forces in line with methods of warfare now current throughout the world.

Mr. Mackenzie wrote the city in reply to a resolution of the board protesting against a reported plan to reduce the number of militia units here and abandon several well-known regiments.

The reorganization calls for a properly balanced force and formation of a greater number of modern units. Mr. Mackenzie said, particularly anti-aircraft, and mechanized artillery batteries, tank battalions and armored car regiments, none of which Canada now has.

"Whereas amalgamation of certain of the infantry and cavalry units or, alternatively, their conversion into formations of modern type may be indicated by the need to arise as to the reduction in the total, either of units or of militia personnel as a whole, in Toronto or the military district of which that city forms a part, he said.

Conductor On C.N.R. Board

Appointment Of Brenton L. Daly Is Confirmed

Ottawa.—Appointment of Brenton L. Daly, Winnipeg, to the Canadian National Railway board of directors, and J. C. McRuer, K.C., Toronto, to the board of directors of the Canadian National railway, was announced by Justice Minister Ernest Lapointe, acting prime minister.

Mr. Daly, a conductor running out of Winnipeg and prominent in railway brotherhood circles, was the nominee of the committee of union chairman who met in Montreal following the invitation of the government to the Canadian National employees to select their own representative on the board of directors.

There will be seven men on the new board which takes over the Canadian National administration October 1, supplanting the present board of trustees. The other six were named last week.

Medico For Far North

Ottawa.—Dr. Thomas Melling, Crossfield, Alta., has been appointed doctor at the government post at Chesterfield in the Northwest Territories, it was announced here. He will relieve Dr. L. D. Livingstone, who has been at Chesterfield since 1934 and is coming out for several months' furlough. Dr. Melling will be one of the last to go into the north this season, leaving Churchill, Man., in a few days in a mission boat.

Report Is Denied

London.—The Ethiopian Legation issued a formal denial of reports that Emperor Haile Selassie has purchased an estate at Bath and intended to establish a permanent residence there.

Food Shortage In Madrid

Demand That Rationing System Be Instituted

Madrid.—Prospect of an acute food shortage in Madrid became the chief preoccupation of the government, as lengthening queues outside groceries and butcher shops threatened to become disorderly.

While the population of the city has been swelled by an influx of civilians and militiamen, the task of bringing in food has grown more difficult in the face of the insurgent advance. Newspapers joined in demanding a rationing system be instituted.

In recent days increasingly long lines of shoppers, mostly women, have formed early each morning in front of Madrid food stores, particularly those selling eggs. During the course of the day some of them got out of hand and quarrelled with the militiamen detailed to maintain order.

The newspapers agreed with government officials there was actually sufficient food obtainable, provided a proper distributing agency could be set afoot.

Ex-Toronto Pilot Killed

British Air-Liner Taking Mails To Hamburg Struck Tree

London.—Captain Walter Fraser Anderson, formerly of Toronto, and two others were killed when an airliner belonging to British Airways Limited struck a tree and crashed in flames after taking off from Gatwick airfield.

Captain Anderson, chief pilot for the line, was living in Toronto at the outbreak of the Great War and returned to England with the first Canadian division. His wife witnessed the crash.

The plane was flying mails to Hamburg and there were no passengers aboard. A fourth member of the crew escaped with injuries.

U.S. TO MAINTAIN A NAVAL UNIT IN EUROPEAN SERVICE

Washington.—The U.S. government moved to re-establish, at least temporarily, the naval squadron it maintained in European waters until seven years ago.

An official announcement said the four warships which recently have been assigned to emergency duty off Spain would be organized shortly into a temporary squadron under the command of Rear Admiral Arthur Fairchild, whose flagship will be the light cruiser Raleigh.

The destroyer Hatfield and Kane and the coast guard cutter Cayuga will complete the flotilla.

Officials of both the state and navy departments said the action represented no change in policy. The effect, they said, merely will be to give name to what actually in fact has been a temporary squadron operating in European waters since the first vessels were dispatched to rescue United States refugees from the Spanish revolution almost two months ago.

Secretary of State Hull said at his press conference the State Department was the sole factor involved and the government had given no consideration to a permanent policy with regard to a European squadron.

ON C.N.R. BOARD

James Y. Murdoch, K.C., Toronto, who is a member of the new board of directors for the Canadian National Railways.

Wants Conference Postponed

Germany Not Ready To Discuss New Security Agreement

London.—Italy and Germany, contending "adequate" diplomatic groundwork is necessary, dimmed British hopes for a conference of the Locarno signatories next month.

Great Britain, France and Belgium are ready to discuss arrangements for a new European security agreement with October 19 the suggested date. But Germany served notice she considered the interim insufficient for such groundwork and Italy suggested that further diplomatic changes take place before a definite date is set.

Informed quarters here considered the chances of a general European settlement had become more remote as a result of Chancellor Hitler's denunciation of Bolshevism at Nuremberg. British circles, however, were not unduly perturbed by the verbal attacks which, it was felt, were destined principally for home consumption.

Plans For Ethiopia

Italy To Launch Modern Highway Building Program

Washington.—Reports to the United States department of commerce indicated that Italy plans to launch a broad, empire-building construction program in Ethiopia when the rainy season ends late this month.

Under plans outlined by Premier Mussolini, advances to the department said, construction of a 2,500-mile network of modern highways will be initial undertaking.

About 1,000 technicians, 30,000 Italian laborers and 70,000 natives will be needed in the road program, the department was informed.

Looking toward establishment of 12-hour air service between Addis Ababa and Rome, a new flying field will be built six miles from the African capital.

Fortune For Charity

New York.—Mary Gardiner Thompson, 61-year-old philanthropist, left \$13,027,737 of her estate of \$14,914,031 to six New York charities, the appraisal showed. Miss Thompson, who died last April 22, was a descendant of Lord Gardiner, who in 1639 bought Gardiner's Island at the eastern end of Long Island from the Indians and obtained for it a royal grant.

HITLER DEMANDS COLONIES

Here is Reich Leader Adolf Hitler as he appeared at the Nazi Party convention at Nuremberg, Germany, accompanied by members of his staff, to address one of the most important Nazi meetings since the formation of the Party.

French Ship Wrecked

Only One Survivor When Vessel Founders Off Coast Of Iceland

Reykjavik, Iceland.—Captain Jean Charcot, noted French explorer, was drowned, together with all but one of the crew of 60 aboard the exploration ship Porpoise Pas, which foundered in a gale off Iceland.

(Some 200 persons residing in London said only 40 persons were aboard the vessel.)

The lone survivor reported was Petty Officer Eugene Geniee, who swam ashore through heavy surf and stumbled, exhausted, into the home of a fisherman.

Geniee gasped out that the vessel grounded on rocks and was pounded to pieces by heavy seas so quickly those on board had practically no chance to escape. He said he was certain none of the 60 members of the crew save himself had survived.

The bodies of 30 men, including that of Dr. Charcot, were washed up on the bleak Icelandic coast.

The Danish gunboat Aegir, which first reported the disaster, searched the seas about the sunken vessel's prodding spars but found no other survivors.

The vessel struck so quickly no distress signals were displayed before she went to the bottom.

Dr. Charcot, 69, had an international reputation as an explorer. The region on the edge of the Antarctic near Grahamland was named for him and is known as Charcotland.

He led two expeditions to the south polar regions in 1906-1909 and in 1908-1910 and held decorations from both the French and British governments.

The last expedition to the south polar area was made in the Pourquoi Pas, which was built especially for the explorer in 1908.

Edmonton District Crops

Farmers Cashing In On Biggest Crop In Many Years

Edmonton.—Rush of new crop wheat being marketed by farmers is pouring an average of \$150,000 per day into the Edmonton district, it was estimated.

Farmers are cashing in on the biggest money crop they have had in six or seven years.

On Sept. 15, a total of 116 cars of grain were loaded at Edmonton district points, on the C.N.R. and the C.P.R.

Bulk of the movement which is believed to be far from its peak as yet, is wheat being consigned to Vancouver elevators.

MUST GOVERN LEAGUE BY SPIRIT OF CONCILIATION

Montreal.—The League of Nations should be governed by a spirit of conciliation and international co-operation rather than coercion, Rt. Hon. L. S. Amery, British secretary of state for the colonies, declared in a statement here.

"First of all," he said, "we should strengthen the real authority and enlarge the membership of the League of Nations by jettisoning all ideas of using it for the purpose of coercion, and by concentrating on its positive functions of conciliation and international co-operation."

"Secondly, we should encourage the natural evolution in Europe and elsewhere of permanent national groups of commonwealths associated in peaceful economic co-operation as well as for mutual security; the best example being the example which we can afford of the workings of the free co-operation in our own empire."

"Thirdly, we should meet any specific dangers that may menace British or any other part of the empire, by adequate preventive measures of our own—without there can be no security, individual or collective—as well as by such strictly limited arrangements with other powers—as may at any given moment be indispensable, avoiding alike the dangers of unnecessary interference or entanglement in the affairs of others, and of complete isolation in the face of menacing possibilities that we cannot ignore."

The league had failed as an instrument for forcible prevention of war because the principle of universal intervention on which the league was based was opposed to all normal instincts and interests of the nations. The league could be saved, he believed, by breaking away from the negative idea of collectively enforced peace and substituting the positive idea of the league as an instrument of co-operation and conciliation.

U. S. S. MUNITION FIRM IS ACCUSED BY COMMITTEE

Washington.—Details of what was characterized as "a most amazing contract" between the Dupont Company and an agent described as an international spy for the sale of munitions to Germany were dug out from one of the voluminous reports of the United States senate munitions committee.

The report said the contract, signed February 1, 1933, was destroyed the next day when "the very questionable nature of some of its provisions were realized," but later the reputed spy was paid \$25,000 by the United States munitions firm.

The committee disclosed the contract in reviewing the evidence it collected on the re-arming of Germany in violation of the Versailles treaty. American munition firms were said to have known of the treaty violation as early as 1934.

At Wilmington, officials of the Dupont Company refused comment, saying their answer would be found in the testimony of the hearings.

The report outlined what it described as "close relations" between E. I. Dupont de Nemours and Company, largest powder manufacturer on this continent, and the Dominant German Chemical trust.

As a result of a patent-trading agreement, the Remington Arms Company, a Dupont subsidiary, paid royalties to a German "competitor" on sales made by the Remington firm to the United States government, the report said.

It added the Pratt and Whitney Company sold \$72,000 worth of aeroplane parts to Germany in 1933 and \$1,455,000 worth during the first half of 1934.

The contract the committee described as "most amazing" was signed February 1, 1935, the committee said, by Felix Du Pont, vice-president of the firm, and "a Mr. Giers, whose real name is alleged to be Peter Brenner and who is reported to have been an international spy."

The committee reported the Dupont firm held a \$1,159,904 investment in I. G. Farbenindustrie, a German chemical trust, and controlled 7.98 per cent of the voting stock of another reich enterprise, a chemical company, Dynamit Actien-Gesellschaft. The latter block of stock was valued at \$892,671.

Use Of Poison Gas

Greatest Effect Would Be To Lower National Morale

London.—Gas when used against a trained population is the least dangerous form of air attack, declared Major S. Blackmore, home office expert addressing the medical practitioners union. Its greatest effect, he added, would be on the national morale.

Major Blackmore said there were three types of gas masks, namely: The service type which would be used by the army; the civil duty type which would be used by rescue parties and others in anti-gas work; and a mask for general use, which would be for five or six hours.

He said the government had acquired a factory to manufacture the masks for general use. These will be kept in stores all over the country in readiness for use. It was not proposed to distribute them to the public in peacetime, he said, because they were delicately constructed and if distributed now might be found useless when the time to use them came.

Major Blackmore said it had been found that a child below the age of four or five could not wear the gas mask and efforts were being made to solve that problem.

Italy Is Satisfied

Wants To Resume Friendly Relations With Britain

Rome.—Italy, a "satisfied nation," has renounced all thoughts of aggression and is looking toward re-establishment of friendly relations with Great Britain, the Corriere della Sera said.

Concerning Italy's maritime needs, the newspaper said: "All idea of aggression, especially from a naval point of view, has been abandoned, and Great Britain would have everything to gain by promoting the development of the traditional friendship with Italy."

"Italy now has entered the group of satisfied powers and a great part of its energies is on the point of being concentrated on the exploitation of its territories and its empire."

Today's Thought

*So shall a friendship fill each heart
With perfume sweet as roses are,
That even though we be apart,
We'll scent the fragrance from afar.*
—Georgia McCoy.

SERVICE

Not gain, but service, is the true object of life. If gain is made the object in one's life, one must inevitably fail, for the simple reason that the best things of life are not to be gained by striving for them; they are of a texture that cannot be grasped. One may strive for bread and win it, but one may strain every nerve to breaking in the pursuit of happiness, and he will never overtake it. On the other hand, if service is made the object in one's life, that life cannot be a failure, for the reason that one has chosen the only path above which the windows of heaven are always open. The happiness that eludes the grasp of every man who strives for it descends, like the gentle dew of heaven, upon him who is striving in service. He also gains what he strives for, and more.

OUR TRUST

There are some men whose measured sobriety and self-restraint win our trust the moment we see them. They impress us by their composure of bearing. They give us the feeling that they have a firm grip on life and that, whatever happens, nothing can shake their confidence.

They are ready for every change of fortune. It was of such a man that Horace was thinking when he described the wise and brave man as being "complete and rounded off," and it is to such a man that we give the name "cheerful." The cheerful man is the man who is—Totos, teres, acque rotundas.

Other Waves

By Omar

*Others will be glad to answer your
Radio Questions. Address him in care
of the Chronicle.*

SHORT WAVES WHAT THEY ARE AND HOW THEY ACT

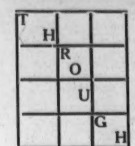

All radio waves travel at the same speed as light . . . 186,000 miles a second. Each complete radio wave is known as a cycle. The number of waves or cycles sent out each second by a station is called its frequency. "Kilo" means a thousand. Therefore, a kilocycle means a thousand waves, or cycles, a second. Station RV59 at Moscow, for example, is authorized to radiate 6,000,000 radio waves a second, or 6,000 kilocycles.

In exploring the mysteries of short waves you will sometimes find stations listed by frequency (kilocycles) and other times by wave-lengths (meters). To convert kilocycles into meters, simply divide 300,000 by the figure you have. Thus station RV59, which sends out 6,000 kilocycles per second, uses a wavelength of 50 meters (300,000 divided by 6,000).

PROTECTION

THE Lord is my Shepherd—what more then can we ask? He gives us strength to win the fight, and courage for our task . . . And if we hunger He has promised that we shall be fed—He will supply our human needs—give us our daily bread . . . And if we are in danger He will stretch His mighty arm . . . The children of the Shepherd shall not come to any harm—for with His love white angel wings enfold us as we go—The evil powers can do their worst—We trust His word—We know . . . The tongue of malice cannot wound a pure and faithful heart—Depression cannot conquer us—Joyous we walk apart—and tread a lonely path perhaps, yet it is good and fair—To live safe in the secret knowledge of His tender care.

FLUFFY CHOCOLATE PUDDING

By Betty Barclay

2 squares unsweetened chocolate
1 1-3 cups (1 can) sweetened condensed milk
1-3 cup water
2 egg whites
Melt chocolate in top of double boiler. Add sweetened condensed milk and stir over boiling water 5 minutes until mixture thickens. Remove from fire and add water. Let cool about 5 minutes. Fold in stiffly beaten egg whites. Pile in Sherbet glasses. Chill. Serves 6.

CROSSFIELD - ALBERTA

High School Corner

(By W.K.G.)

The following article has been contributed by Margaret Cameron as part of her work in Grade IX Social Studies.

A DRAMATIC INCIDENT OF THE HISTORY OF 1936

The greatest crisis in European Politics since 1914 was foreseen and successfully passed by King Edward VIII, when Germany moved troops into the Rhineland. Mr. Litvinoff of Russia made representations to the delegates to the effect that war was the only thing that would stop Germany. Russia wanted war.

King Edward, unlike most of his predecessors on the British throne, was thoroughly familiar with his country's foreign relations, and more, he was prepared to use his authority as a king. He knew Russia's attitude and that she was ready to have war on any country. He knew how close Litvinoff and his own minister, Mr. Anthony Eden, were, and he knew too that Litvinoff was likely to dominate a Geneva Conference.

So His Majesty took it into his own hands to arrange for the League of Nations Conference to be held in London where he might watch it and prevent any rush moves. His ministers had definite instruction as to what the result of the conference should be.

Mr. Litvinoff was unsuccessful in his plan, but the meeting turned out like King Edward wanted it. The Duke of Gloucester helped His Majesty with his plans. After the crisis had quieted, Mr. Ribbentrop, Hitler's ambassador, talked alone for over an hour with King Edward, thus preventing war. It is plain to see that the world's most popular prince has become a real king.

Plan For Stimulating Work On Repairs And Improvements To Homes

A plan under which the Dominion government will guarantee lending institutions against losses up to 15 per cent. for loans to a maximum of \$50,000.00 to home owners for repairs and improvements on dwellings, was announced by Prime Minister Mackenzie King and A. B. Purvis, chairman of the national commission on employment and relief.

The government is also working, it was stated, on policy of providing low rental homes in urban centres, possibly involving slum clearance, and construction of houses of a class suitable for those whose income enable them to purchase when convenient payments can be arranged.

All this will be in conjunction with and dependent upon provincial, municipal and community co-operation.

At the same time it was announced steps were being taken in co-operation with the provinces, whereby single unemployed transients would be put to work in primary industry during the coming winter at wages as near as possible to the general prevailing rate.

The prime minister, Mr. Purvis and Hon. Norman Rogers, minister of labor, gave details of the broad policies on employment tentatively adopted. Some of them will require federal legislation at the next session, and some provincial legislation may also be involved. No special session would be required, the prime minister thought, but all preparations would be complete to introduce legislation when parliament meets in January.

Encouraged by the outcome of similar provisions made by the United States government, the intention is to extend the housing act to the extent that persons loaning up to \$2,000 may be advanced to home owners without endorsement at a maximum of five per cent. interest for terms up to five years.

Guarantees against losses up to 15 per cent. of the total over a given period will be made by the Dominion government, the total maximum liability to be thus assumed to be fixed initially at \$7,500,000—covering \$50,000,000 worth of loans.

Following are detailed recommendations of the commission on home rehabilitation, which the government has tentatively accepted, as contained in an official statement:

- (a) The Dominion to guarantee chartered banks and other responsible approved lending institutions against losses up to 15 per cent. of the aggregate value of loans made by each such institution for the financing of repairs and improvements of all kinds on dwellings;
- (b) The limit of the aggregate loans to be \$50,000,000 and the limit of the government risk therefore \$7,500,000;
- (c) The government to retain the right to announce at any time that no further loans will be guaranteed for all lending institutions or for a particular one;
- (d) The government administrative action to be limited to accepting and recording loans for guarantee; receiving claims and paying them;
- (e) The conditions which the lending institutions will have to meet to obtain the government guarantee to be:

- (1) Maximum loans on one property, \$2,000.
- (2) Loans to bear not more than five per cent. discount rate repayable in equal monthly instalments over one year or a pro rata discount rate for other periods. No service or insurance charges nor any additional charges of any kind except as provided for arrears.
- (3) Duration of loans, one to five years.
- (4) Loans to be used for rehabilitating and improving existing real property owned by the borrower. Not for building on vacant land. Fixtures but not removable attachments or appliances to be considered as improvements.
- (5) No endorsements to be required.
- (6) Loans only to be made to owners.
- (7) Stipulated penalties for arrears.
- (8) Taxes, mortgage payments and etc., to be in standing acceptable to lending institutions.

The animal with a human face, two wings and a peacock's tail, which is supposed to have carried Mohammed to heaven, was called Al-horah.

Canada is now the most important supplier of paper to Japan.

Worked Chain Of Farms

Englishman Was Highly Successful But Used No Livestock

The story of how George Baylis of Boxford, Berkshire, made a fortune of almost £250,000 (\$1,250,000) by farming without livestock has been read with interest and surprise throughout the United Kingdom.

How he did it was explained at an agricultural conference at King's Lynn, Norfolk. Baylis' will was proved at £245,000.

C. S. Orwin, director of the Institute for Research in Agricultural Economics at Oxford University, told the conference that Baylis began farming in Berkshire in 1866 in the traditional way for grain and roots with bullocks and sheep.

After six years Baylis lost £600. Then he decided to abolish livestock from his farming system and grow grain by the application of ammonia and phosphates. He evolved a six-course rotation with three grain crops, two bare fallows and a clover crop.

Baylis made money while his neighbors either went bankrupt or stopped growing grain. Before his death he was farming 12,000 acres, half of which he owned. The only livestock on it was some 300 working horses.

The agricultural correspondent of the News-Chronicle writes: "It is perhaps fortunate for England that Baylis has not found many imitators. For his system was to acquire a chain of farms and work them with gangs of men who travelled round the enormous estates. Villages became obliterated in the process. Farms were either pulled down or allowed to decay."

Baylis grew nothing but grain. He was known as the barley king.

Discovered Something New

Texas Man Finds Goose Can Weed Cotton Fields

"Don't be a goose" has lost much of its sting as a term of opprobrium in Van Zandt county, Texas. In fact, a goose is almost as good as a man. At any rate, five geese are as good as a man—in the cotton field.

Some score years ago, C. C. Simmons, a Van Zandt county farmer, faced a heavy loss unless he could find some means of eradicating the heavy growth of Johnson and crab grass spreading across his cotton field. In desperation he fenced his land and put a flock of geese in the field. He was surprised and gratified when the feathered tribe cleaned the field of the wild grass without damaging a leaf of the cotton.

This year, nearly all the farmers in the county use feathered farmhands to weed their cotton fields of undesirable grasses. It is estimated that 25,000 geese are being used for this purpose in the county. Five geese can do the work of one farmhand.

The geese have another advantage over human farmhands. "The latter work 'from sun to sun' while the geese average from 15 to 18 hours a day in the fields. They often take a siesta on hot days, from the middle of the morning until the middle of the afternoon, but make up for lost time by working on moonlight nights."

Can Beat Adding Machine

Blind Man In Lisbon Is A Rapid Calculator

Mental mathematics have been practised to such a degree by a blind man in Lisbon that he can work faster than an adding machine. A beggar all his life, he has earned a living by selling lottery tickets through the streets of Lisbon. Buying a ticket from him recently, a professor of mathematics noticed how rapidly the blind salesman calculated mentally the amount and the change that was required. Giving the name of Manuel Moreira the blind man told the astonished professor that he was able to make any additions or multiplications, or divide any numbers of 10 or more—figures all in his head. Unable to write, Moreira simply concentrates while numbers are told to him. Prominent mathematicians in Portugal have tested him with the most complicated accounts, but he delivered the correct results within a few seconds. Taken to a bank, he proved he could work faster than an adding machine and without a single mistake.

Denmark now numbers its eggs so that they can be traced back to the farmer.

STALIN AND LIKELY SUCCESSOR

Josef Stalin, dictator of Soviet Russia, is shown, left, with Klement Voroshilov, war commissar, who, it is reported, would succeed Stalin in the event of the latter's death. It has been officially denied, however, that Stalin is mortally ill, and that Voroshilov is preparing to step into his office. Stalin is reported in "excellent health."

Alcohol And Motor Driving

British Medico Gives Report Of Investigations

Dr. Horace Middleton Vernon, former investigator for the industrial health research board, told the British Association for the Advancement of Science alcohol makes the motorist's heart beat faster.

He informed the scientists exhaustive researches had shown incontrovertibly that whiskey makes motorists drive a bit faster and less accurately. Beer in reasonable quantities, however, was found to be comparatively innocuous.

Describing the tests which led him to these conclusions, Dr. Vernon said the National Institute of Industrial Psychology had rigged up a dummy automobile and created artificial conditions approximating road driving.

Then, he said, the National Institute of Industrial Psychology had bought drinks of whiskey and beer for 15 experienced motorists.

Dr. Vernon reported mild doses of beer seemed to have been downed by the motorists in their stride with little apparent effect on their performances.

But, he said, indulgence in more than one large shot of whiskey reduced by six per cent. the time of the driver's reactions.

Such indulgence, he said, further increased by 12 per cent. driving errors, with the motorists themselves glibly unaware of their shortcomings.

The association elected Sir Edward Poulton, former professor of zoology at Oxford University, next year's president to succeed Sir Josiah Stamp.

An Optimistic Note

An optimistic note on the future of Western Canada was sounded at Medicine Hat, Alta., by Governor-General Tweedsmuir. "Western Canada in general," he said, "has neither been spoiled by prosperity nor discouraged by adversity. You have baskets for all your eggs."

Rubber roads are being tried out in Australia. The land of the kangaroo hopes to be a jump ahead of other countries in providing a softer landing for motorists tossed out of their cars in collisions.

To Relieve Pain

Two New Developments Reported By Medical Science

The American Congress of Physical Therapy closed its annual meeting in New York with reports on two developments asserted to relieve pain.

Dr. Harold R. Hopkins, visiting surgeon, Johns Hopkins University, Baltimore, described how air containing oxygen was injected into joints to cushion them and bring relief from acute or subacute arthritis.

A single injection of air, he said, usually relieves "water on the knee."

Dr. Benjamin Ulanak, of Jefferson Medical College, Philadelphia, told how a stepped-up electric current was used to treat what is commonly known as "facial neuralgia"—a nervous ailment in the face with sharp shooting pains.

Modernized Moscow

Miss Agnes MacPhail Gives Impression On Visit To Russia

A modernized Moscow and systematized Scandinavian countries were impressions Miss Agnes MacPhail brought back to Canada upon arrival from Europe.

Old Moscow is becoming modernized, the U.F.O. Labor member of parliament for Grey-Bruce, said. Cobblestone streets are giving way to asphalt thoroughfares, buildings are being erected, hotels opened, students centers organized and universities built.

Scandinavian countries also are advancing rapidly, she found. Co-operative systems in both Sweden and Denmark have been beneficial to the countries, particularly the former, where they have helped banish the depression.

Something In A Name

Because the word "scribblers," applied to notebook, is said to have a bad psychological effect on primary school pupils, the more modern term of "work book" has been substituted by educational authorities in London, in the hope of making the children more ambitious.

Wood shavings, not sawdust, are used to cover circus arenas.

The Garden Of The Future Will Be Enclosed In A Cloth House, Says Expert

Weeds Are Expensive

Cost Canada One Hundred Million Dollars Every Year

Perennial weeds cost the Dominion of Canada in the neighborhood of \$100,000,000 each year.

Facts to substantiate this statement and methods recommended to reduce the loss were exhibited in Dominion Department of Agriculture demonstration in the North Wing of the Government's Building at the Canadian National Exhibition, Toronto.

Sodium chlorate sprayed over the ground kills all perennial weeds, but due to the expense involved, its use is only recommended for small patches.

Other methods for eradicating annual weeds instead of plowing the use of a weeder or harrow when the weeds are small and the grain not more than two inches high; heavy rates of seeding grain crops; heathery annual weeds; spraying with a three per cent. solution of copper sulphate at the rate of 100 gallons per acre kills mustard.

For perennial weeds, plowing in midsummer followed by cultivation for the remainder of the season in order to keep down all top growth is recommended. Hood crops such as buckwheat, if grown for two years in succession, will eradicate most perennial weeds, it is claimed.

The cereal division, attracted considerable attention. Fifty years ago the experimental farms were established, and the exhibit this year celebrated its thirtieth anniversary.

Transplanting Peonies

Too Deep Planting Often Cause Of Plants Not Blooming

September is the best time to transplant peonies. If the plants have grown large and the flowers are fewer or smaller than they used to be it is probably time for the roots to be taken up.

To divide a large plant, dig it up carefully, shake off the loose earth and leave the plant exposed to the sun and air for an hour or two. This will make the tubers less brittle so that they will not break so easily when handled. Wash off all the soil with water and cut off the foliage, just leaving a few inches of stem above the crown. Examine the root and try and find out where it can be divided with as little damage to the tubers as possible. A division with five eyes is a good size but larger ones can be used if desired.

If a bed of peonies is going to be planted, it is a good plan to prepare the soil a few weeks before by digging deeply and adding some well rotted manure at the base of the trench. If the peonies have to be replaced in the same place, the old soil should be removed and replaced by some good soil to which bone meal at the rate of a handful for each plant has been added. In planting, place the tubers so that there is only two inches of soil above the crown. Too deep planting is frequently the cause of peonies not blooming.

At the first winter, it is advisable to mulch the beds so as to prevent the alternate freezing and thawing that is so harmful in some districts.

Russia Wants Seed Wheat

Canada's Rust Resistant And Hard Milling Types Being Bought

Best new types of Canadian wheat chosen for their rust-resistant and good hard milling qualities are being bought in experimental quantities as seed for potential widespread planting in the Soviet Union. It was announced at Edmonton by A. S. Eslopov, executive in charge of grain experimentation for the entire U.S.S.R.

Mr. Eslopov, whose headquarters are in Moscow, went to Edmonton to confer with Dr. K. W. Neathby, professor of the field crop division of the University of Alberta, to arrange for purchase of some seed grain and to study the activities of several leading seed growers in the Edmonton district.

Mr. Eslopov, whose portfolio is "chief of the state plant-breeding fund of the Soviet people's commissariat of agriculture," declared the Soviet Union is not in the export market in competition with Canada as far as grain is concerned.

Five hundred cases of ear treasures are reported to be prepared for shipment from Peking, China, to Shanghai and Hankow, to assure their safety in case of war.

The garden of the future will be enclosed in a cloth house, declared Dr. George I. Christie, president of the Ontario Agricultural College in an interview at the Canadian National Exhibition, outlining results achieved through research work at the college.

"This year we erected a cloth house for plants the area of the average garden. We planted tomatoes, cauliflower, aaters and lettuce inside the cloth house, and again in an area of equal size and in similar surroundings out in the open air. Where aaters were from eight to 12 inches high with a blasted bloom and attacked by the aater beetle, in the cloth house the aaters were able to grow them by the thousand with the most perfect stems 24 to 30 inches high, and in a mass of solid bloom."

"The cauliflower plants show almost a perfect difference. We feel we have conclusively proved the value of a cloth enclosure," he said.

"We used cheesecloth. We erected four posts eight feet high and strung wires held in place by the posts in position. It was possible therefore for men to work with ease inside the garden."

"We found the cheesecloth increased the humidity of the air, prevented moisture from escaping, by cutting off the movement of dry winds, and kept out insects. It was chiefly by means of the increased humidity that we were able to obtain such spectacular results, though freedom from insect attacks was an important factor in the growth," Dr. Christie explained.

In co-operation with the Hydro Commission the college plans to erect a glass house to replace the greenhouse. Dr. Christie said. Instead of a glass-in structure to allow all the possible sunshine to reach the plants, the plan calls for a house insulated with glass wool in a narrow light from above four feet wide calibrated for Gueish conditions. Lighting with electric bulbs, it is believed, will furnish sufficient heat for the plants.

The house is to be lined with metal in order to retain the highly concentrated carbon dioxide gas and which under present conditions escapes to a large extent, he said.

A further experiment which has shown definite results emanates from the poultry department of the college. "We have been feeding the juice of young grass mixed with buttermilk and mineral material, and have been able to produce for the first time show birds with the color of legs and sheen of plumage which we want. The food apparently contains just the proper vitamins to produce the required effect. And there is a possibility of us taking young grass before it joints and saving it for winter to use in this feeding," he continued.

Virtue In Tomatoes

Discover Secret Of Population Increase On Virgin Islands

The division of territories and insular affairs believes it has discovered the secret of a population increase on St. Croix, one of the Virgin Islands. The cause, in brief, is tomatoes.

Until a couple of years ago the natives of this small island lived principally on cornmeal and fish, with occasional slices of sugar cane. The birth rate rocked along, the division explained, at about the same rate for years.

Convinced something besides sugar cane could be grown on the island, the government introduced tomato plants.

Pretty soon, a division spokesman said, everybody was eating tomatoes and speaking favorably about the taste. At the same time the birth-rate began an upward swing.

Substitute For Sunshine

Little pigs are now being fed cod liver oil during the winter in order to make up for the lack of sunshine, said Dr. G. I. Christie, president of the Ontario agriculture college, Guelph, in connection with the agricultural display from the college at the Canadian National Exhibition in Toronto. Use of scientific food has vastly improved pigs in tests, he said.

Owens Old Violin

A violin 186 years old is still in use at Edmonton, Alta. Gered and played by Robert Buchanan, it was made at Mittenwald, Germany, by Bartholomew Kramer in 1780. The instrument is valued at more than \$1,000. It has carried down the decades a glorious mellow tone.

Exciting New Beauty For Your Needle

PATTERN 5310

This sampler is just the thing for the entrance hall or guest room. It's entirely in 8-to-the-inch cross stitch, except the lettering. You'll find it fascinating to do in color. It would make an excellent gift for a bride-to-be. In pattern 5310 you will find a transfer pattern of a sampler 12 1/2 x 24 inches; a color key; material requirements; illustrations of the stitches needed.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 176 McDermott Ave. E., Winnipeg.

Operated By Remote Control

Driverless Car Observed All Rules Of
The Road

Bliss New Yorkers gasped at a
vacant automobile which observed
all the rules of the road as it wove
through traffic on a busy Manhattan
street.

Patrolmen watchful for traffic
violations investigated to find that
the automobile was being operated
by remote control by the driver of
another car which preceded it.

They thumbed their traffic law
book in vain to find an ordinance
barring driverless cars and finally
took the automobile and Harold
Jonas to the police station.

Jonas explained that Charles A.
Harnett, motor vehicles commis-
sioner, had said he knew of no law
barring remote control operation and
had given permission for the experi-
ment.

The police sergeant made an entry
to this effect on the blotter and the
driverless car moved down the street.

Regular breeding establishments
first were erected in 1700.

There are 8,430,800 cattle and
calves in Great Britain of Canada.

WORLD HAPPENINGS BRIEFLY TOLD

Maine elected a Republican gov-
ernor and three Republican congress-
men in the recent state election.

The Dominion government will pay
100 per cent of the cost of direct
relief in drought-stricken southwestern
Manitoba, Premier Bracken an-
nounced.

C. W. Goyer, 28, who invented a
radio transmitter and held the first
two-way conversation between Eng-
land and New Zealand, has been ap-
pointed engineer-in-charge of All In-
dia radio.

peal board dealing with cases under
to the close of navigation of the
river, will be suspended from Oct. 1
to May 31, except for the post
offices of Cardross and White Horse.
The service will be suspended to
Champane from Dec. 1 to March 31.

Grain experts in Ottawa agree
with a forecast from Chicago that
Canada's wheat surplus will be dis-
posed of by the end of the present
crop year, July 31, 1937. It would
not be necessary to sell as much as
last year to accomplish this.

Arthur E. Cavanagh, general man-
ager of the Tensimaking and North-
ern Ontario Railway, said that
amalgamation of shop, car and yard
facilities of the T. and N.O. and the
Canadian National Railways at
Cochrane is under consideration.

Calgary's application to the bond-
holders for reduction of interest
rates to possibly three per cent. In
order to save that city \$400,000 a
year is to be taken up with the In-
vestment Dealers' Association of
Canada.

The League of Nations Society in
Canada, announced appointment of
Miss Elizabeth P. MacCallum,
New York, as officer in charge of
the newly-established international
affairs information service to serve
its members and the general public
throughout Canada.

Former president of the Alberta
Municipal Districts' Association,
Frank H. Holmes, of Beaver Mines,
Alta., has been appointed to the ap-
Parcel post to the Yukon, owing
the federal creditors arrangement
act in the province, it was an-
nounced.

A Famous Fisherman

Zane Grey, Noted Novelist, Has
Broken Another Record

Zane Grey, novelist and big-game
fisherman, has broken another record
by landing with rod and line a giant
devil ray off the Queensland coast,
which weighed more than 1,200
pounds.

It measured 12 feet across the
back and was 10 feet six inches long,
he reported. It is one of the few
giant rays ever caught with rod and
line, and was landed only after a
terrific struggle of nearly four hours.

The devil ray is a giant species of
the stingray or "stingaree," has
been known to exceed 20 feet in
width and half a ton in weight.

Grey recently broke the world's
record by landing an enormous shark
with rod and line off the New South
Wales coast.

First Invitation Issued

King Of Greece Receives One To
Attend Coronation

King George II. of Greece received
what was believed to be the first in-
vitation to King Edward VIII's
coronation in London next May.

The invitation was extended by
Sydney P. Waterlow, the British
minister at Athens. It was framed to
include also the members of the
Greek cabinet.

Persons close to King George said
he would either attend in person or,
if circumstances prevented, would
send Prince Paul, his brother.

The Greek ruler has long been on
the friendliest terms with the British
royal family, whose guest he was at
the time he was recalled from exile
to return to the throne.

An Underground Home

English Millionaire Is Building A
Bomb-Proof Wonder House

The first bomb-proof underground
home in Britain is to be built—for a
millionaire—beneath a lonely stretch
of beautiful meadowland in the heart
of Hertfordshire.

This "new wonder house" will be
specially air-conditioned and flooded
with artificial sunlight, and accord-
ing to experts, it will make a health-
ier home than the ordinary above-
ground house because it will not be
subject to air-carried infections.

The Atacama desert, in Chile, is
the driest spot on earth.

Every 100 seconds a road crash
occurs in Great Britain.

BLINDING HEADACHES MADE HER HELPLESS

Forced To Lie Down For Hours
At A Time

Other sufferers from headaches will
be interested to read this letter—
"Until last summer I was subject
to very bad headaches. While they
lasted I seemed to lose my sight and
all power in my hands, and was
forced to lie down for hours at a
time. My aunt (who has taken Krus-
chen Salts for years) suggested my
trying them. I did so, and I've not had
any return of those headaches for months
in fact I feel quite better, I shall al-
ways take Kruschen regularly in
future."—(Mrs.) M.W.

Headaches can frequently be traced
to a disordered stomach, and to the
unsuspected retention in the system
of stagnating waste material which
poisons the blood. The numerous salts
in Kruschen assist in the complete
elimination of waste matter, result-
ing in purer blood-stream, and thus
helping to bring relief from
headaches.

Plan Largest Liner

Sister Ship Of Queen Mary To Be
Fastest In World

The sister ship of the Queen Mary,
the keel of which will probably be
laid in November or December, is to
have a peak speed of 36 knots, ac-
cording to the London News-Chron-
icle. Leading draughtsmen of John
Brown and Company are now plot-
ting out the final theoretical designs for
"552".

As soon as they are finished
models, built to the paper measure-
ments, will be tried out in the com-
pany's experimental tank.

The liner will be about 80,000 tons
and at least 12 feet longer than the
Queen Mary.

These stipulations will make her
without doubt the largest and fastest
liner in the world.

The best features of both the
Queen Mary and the Normandie will
be embodied in the new ship. The
economic running the Queen Mary
beats the Normandie. But the
French liner is said to be better
streamlined.

The geared turbine system of the
Queen Mary has satisfied the experts,
that it is superior to others, and the
same type of engine will be adopted
in the sister ship.

Ceaseless tests by John Brown and
Company since the Queen Mary left
the Clyde have demonstrated that
the turbine system can be perfected to
save about 15 per cent. more in
running costs.

Arrangements have been made to
take on the extra men required for
building the ship.

As soon as the decision to lay the
keel is made, 2,000 men will be em-
ployed, and by the end of next year,
when she is expected to be launched,
about 4,000 will be engaged in her
construction.

From then until the ship leaves the
Clyde in 1940 the number of men
employed will steadily increase until
at the peak of the fitting out in her
basin at least 12,000 will be working
on the ship.

Build Up Odd Profession

Man In London Is Greatest Living
Expert On Noise

There is a man in London who
lives on noise. Noise has become one
of the great problems of our age,
and this scientist and engineer was
quick to see the possibilities. He be-
came the greatest living expert on
noise. In fact he has built up out of
noise what might be regarded as one
of the oddest professions in exist-
ence—that of "Noise Consultant."

This man with the unique job is
Professor A. M. Low, well known as
a pioneer of wireless and an expert
on popular science, whose articles
have frequently appeared in print. He
has devoted 25 years to the study
of noise, ever since he listened
to the noise made by a motor-cycle engine.

Today you voyage in a modern
ocean-going liner and note the
absence of the multitudinous noises
common to many ships. Nine times
out of ten it is Professor Low's
knowledge which has eliminated
them. You buy a new car and com-
ment on its silence, its freedom from
body rattles and squeaks. Again it
may be Professor Low who has
solved the manufacturer's difficulties.

He is a modern Sherlock Holmes
tracking noise to its lair.

Britain's Colonial Empire
Speaking In Vancouver, Lord
Tweedsmuir made a noteworthy ob-
servation in reference to the view
expressed in some quarters that
Britain should share her colonies among
countries that lack colonies. "I
would protest most strongly," he
said, "against the notion that we
won our colonies by a lucky gambler.
We have been making our colonial
empire for 300 years."

SUNDAY SCHOOL LESSON

SEPTEMBER 27

THE SPREAD OF CHRISTIANITY
IN WESTERN ASIA

Golden text: They rehearsed all
things that God had done with them,
and that he had opened a door of
faith unto the Gentiles. Acts 14:27.
Devotional reading: Matthew 13:
24-33.

The Genesis of Paul. Why did Paul
and others of these early disciples
keep moving around after such a
restless fashion, preaching here for
a few days or weeks, and establish-
ing a little Christian group and then
moving on to another field of labor?
Why did they not settle down in one
place and stay at their task until
they had won the whole community
to the faith and built up a strong
and enduring church?

Dr. John Gardner shows how wise
was the genius of Paul. "He grasps
the problem of the world's misery in
brilliant fashion. He will follow the
great trade routes. He will build his
bases in cities and from them he will
reach the provinces. He will first
begin in the synagogues, for here
are praying folk, believers in Je-
hovah; here are the sacred Scrip-
tures, and here a man may preach.
He will reach out through the con-
verted proselytes to the Gentile
world. He will utilize the work, link-
ing up the new churches to the old,
teaching them to give to the neces-
sities of the poor in distant places.
He will return to consolidate the
work."

Many Helpers in the Work. We
must not forget that the Christian-
izing of Western Asia was not the work
of the apostles and their
especially chosen helpers, but that
a great company of men and women
co-operated with them. Great lead-
ers are needed in any worthwhile un-
dertaking, but followers and helpers
are needed quite as much and in
many ways vastly more. Good
preaching is necessary, but intelli-
gent and sincere response to such
preaching is also essential. In the
Acts and Epistles we see how men
and women responded to the Chris-
tian communities. With all his zeal
and earnestness, Paul would have
failed in many instances had not
others stood by him loyally and
faithfully in times of testing.

New Surgical Operation

The possibility of a new surgical
operation involving the repair of the
heart is discussed in the annual re-
port of the Royal College of Sur-
geons. The operation is designed to
remedy certain conditions in which
the heart muscles are atrophied. It
involves a delicate "grafting" tech-
nique, the aim of which is to provide
an alternative path of circulation
through the heart.

Simple Crochet Makes Swagger Coat

PATTERN 5693

This waffle-weave in a mixed yarn with plain collar, cuffs and pocket
trim in a stitch that looks like Persian lamb, is Fashion's newest note in
crochet. The swagger coat—three-quarter length—is just the thing for Fall.
It will be appropriate for many occasions—it's even swaggy enough to
wear over a suit. If you prefer, you can use a plain yarn. In pattern 5693
illustrations of it and of all stitches needed; material requirements.
To obtain this pattern send 20 cents in stamps or coin (no cash) to
Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave.
E., Winnipeg.

There is no Alice Brooks pattern book published

At that very first WARNING SNIFFLE

...Use this unique aid for preventing
colds, especially designed for nose and
throat where most colds start. Used in time,
Va-tro-nol helps to avoid many colds.

VICKS VATRO-NOL

New Lie Detector

Tests With New Device Prove Very
Satisfactory

A new lie detector much more ac-
curate than previous devices used in
crime detection was described before
the American Psychological Associa-
tion.

Dr. W. G. Summers, head of the
Fordham University department of
psychology, told how tests with the
"psychogalvanometer," on 50 groups
of college students had detected the
guilty with only two per cent. of
error.

Older lie detecting machines
known as "polygraphs" record on
paper the blood pressure and heart
beat of the person examined. Dr.
Summers' instrument instead mea-
sures extremely small electrical cur-
rent changes in the body.

Missing Landlord Found

Did Not Know Building Was His
Until Tenants Fought

George Ortelstein, a real estate
dealer, was surprised to learn a six-
story building on Elmore street, Chi-
cago, was included in a parcel of real
estate which came into his possession
through a mortgage transaction.

He might never have found it out,
he mused, if two of the tenants had
not quarrelled and gone to court,
where incidental questioning revealed
nobody in the building had paid rent
for ten years because nobody knew
who owned it. An investigation dis-
closed Ortelstein's unsuspected status
of landlord.

His attorney said rent would be
collected hereafter.

"Where is the manager's office?"

"Follow the passage until you
come to the sign reading 'No admis-
sion.' Go upstairs till you come to
the sign 'Keep out.' Follow the cor-
ridor till you see the sign 'Silence,'
then yell for him."

Paying Off Saddest Debts

British Pensions' Ministry Expects
To Finish Work In 1935

The British ministry of pensions
hopes to finish paying for its share
of the cost of the Great War by 1935
—41 years after its outbreak.

Last year the gross expenditure
of the ministry of pensions was £43-
296,874—for war pensions and com-
pensation allowances to 1,006,000
people.

Since 1918 the ministry has spent
£1,135,000,000, and more than £130-
000,000 of that sum has been used
for food, clothing, and education for
war orphans. In 1921, the peak year,
the ministry paid out £60,000,000 in
pensions.

At the end of the war there were
67 ministry-controlled hospitals for
disabled soldiers. Now there are 10
and a few clinics for out-patients.

"In a few years' time," an official
at the ministry said, "only £1,000,000
a year should be needed for pensions.
And it is estimated that the ministry
may finish its work by 1935."

One of the saddest facts in the
figure is that over 6,000 officers and
men are certified insane. More than
10,000 fighting men are undergoing
treatment in hospitals and are not
able to leave although there are still
hopes that they will be cured.

In 1921, 17,380 hospital beds were used.
Today only 3,200 beds are needed in
hospitals controlled by the ministry.

Once there were 260,000 war wid-
ows receiving pensions. Today the
figure is reduced to 124,415, 120,000
of them having remarried.

Paderewski In Movies

Beauty Of His Music To Be Heard
In New Motion Picture

Ignace Jan Paderewski is having
the time of his life as a movie star
at 75 years of age.

Hundreds of movie extras are
thrilled daily by the aged master
pianist and statesman, according with
enthusiastic delight the beauty of his
music in the motion picture "Moon-
light Sonata."

Playing with Charles Farrell, Pad-
erewski works daily from 3 p.m. to
7 p.m., playing again and again the
numbers he contributes to the
picture.

His contributions to the movie in-
cludes the title number, Beethoven's
"Moonlight Sonata"—according to
tradition inspired by the sight of a
blind girl playing the piano as a full
moon cast its beams across the in-
strument, and works of Schubert
and Grieg.

Informality Of The West

Governor-General Is Addressed By
Mayor As Mr. Tweedsmuir

Informality of the west greeted
Baron Tweedsmuir, governor-general
of Canada, when he visited a south-
ern Alberta town, it was related at
Medicine Hat.

"It's not often we meet such no-
table people as Mister Tweedsmuir
here," said the mayor, dressed in his
everyday clothes and a sweater.

It was the first time the govern-
or-general had been addressed as "Mister"
since his arrival in Canada.

"I found the salutation distinctly
refreshing," said Baron Tweedsmuir.

For dining table use, aluminum
tongs have been invented with which
juice can be squeezed from a piece of
lemon without spraying a table or
staining a user's fingers.

THE Household Baker

Mildred Mae McKenzie, supervisor of the Ogilvie Flour Mills Institute of Household Science, will send free information on cooking, baking and housekeeping problems, upon receipt of coupon from a bag of Royal Household Flour, Address: Mildred Mae McKenzie, care of The Ogilvie Flour Mills Co. Ltd., Winnipeg, Man.

Ogilvie Royal Household Flour is triple-tested to help ensure your success in baking—tested for wheat quality before milling, for flour quality during milling and for baking quality after milling—all before you buy. Whether for bread, cakes or pastry, its uniformity and absolute dependability will simplify your baking to an amazing degree.

Get a bag today and try these tested recipes with Triple-tested Flour.

TRIPLE-TESTED

Due To Physical Changes

Reason For Increase In Blood Pressure Is Explained

The rise in one's blood pressure is not due to the exercise itself but to physical changes. Prof. R. J. S. McDowell, president of the physiology section, said in a paper read at Blackpool, England, before the British Association for the advancement of science.

If exercise could be taken without physical stress being involved—without the brain knowing the exercise was being taken—the blood pressure probably would fall, he said. This had been found to occur in horses.

Explaining that when a person exercises the blood pressure rises but falls even below normal when the exercise stops, Prof. McDowell said this had been explained as due to the accumulation of blood in the dilated muscles.

His observations led him to believe this theory was not wholly correct. He found the fall was due at least in part to a lessening in the resistance of muscles hardened during the exercise.

Clean Your Chimney

The cost of cleaning or repairing a chimney is trifling when compared with the cost of rebuilding a home. Yet more homes are damaged or destroyed every year by fires originating in defective chimneys and flues, than by any other single cause of fire. With the approach of winter rural and town residents should have all chimneys and furnaces cleaned and all defects repaired.

Coleman Hot Plate Cooks with Air!

It's the only hot plate that cooks with air! No gas, no electricity, no fire! Just Coleman's Hot Plate! It's the only hot plate that cooks with air! No gas, no electricity, no fire! Just Coleman's Hot Plate! It's the only hot plate that cooks with air! No gas, no electricity, no fire! Just Coleman's Hot Plate!

Thou Shalt Not Love

— A NOVEL BY —
GEORGIA GRAIG
CHAPTER VI—Continued

"I know a few desert songs, too, Hassan," Starr told him. "The English words."

Michael grinned as he had every time she had called him "Hassan" since the first time. That fitted in, too.

"What could be sweeter?" he asked. "Practice up on 'em, Starr. I suppose your name really should be Suleika, or something of the sort, but we'll skip that since you insist on your own. . . . Maybe there ought to be an American serving woman, with a lot of jingling anklets and a purple handkerchief over her head."

"They're dirty," Starr said. "Anyway, I can wash my own back."

There were some interesting times during the next few days while they found and fitted up the apartment which should be the home from which "Play-Girl" would burst upon New York cataclysmically. Every moment was full. Starr had never imagined there could be such joy in marching into the smartest dress shops and merely making known her desires, when some sinuous manikin paraded before her, to become the possessor of the loveliest clothes that ever warmed any girl's heart.

There were a few other interesting moments, not quite such happy ones, when she went back to Mrs. Maloney's, for her possessions. She was going to have all new clothes, of course, and such clothes! But there were a few cherished treasures at the Maloney place with which she did not want to part, even if she could hold onto them for only six months.

The landlady was all smiles and expansive when Starr paid her bill in full.

"No hard feelings, I'm hopin', Miss Ellison," she purred, "and I sure hated to lock up your clothes like that, but it's like I was tellin' you, you can't—"

"It's of no consequence, Mrs. Maloney," Starr assured wearily, as she moved by her to climb the steps to her hall room.

Mrs. Maloney, folding the bills to tuck inside her ample bosom, beamed.

"Well, you'll find everything okay, Miss Ellison," she insisted. "You got clean clothes and—"

"Oh, did I forget to mention that I would no longer be needing the room?" Starr drawled over her shoulder, but did not pause.

"You ain't? Where you think you're goin', Miss—the Waldford?"

Starr smiled down on her from the head of the stairs.

"No," she shook her head. "I've taken a suite at Essex House while I'm furnishing my new apartment. It's quite comfortable."

Mrs. Maloney's eyes bulged. "You you ain't kiddin'?"

Starr smiled wilyly and her slight shoulders shrugged.

"Far from it. I—I'm taking a penthouse."

Her former landlady glared, and her lips shut tight. She opened them to snap:

"So it's like that, is it? It just goes to show 'y' never can tell. . . . An' there I was thinkin' 'you was a nice girl, too!'"

Starr let her go; did not make any attempt at explanation. But she was smiling oddly as she went on to do her packing. Let the woman think what she chose. It was of no consequence—any more was anything else. Besides, this was good practice in the new role she was to assume.

Just an episode. Starr forgot it immediately in the excitement of having lunch with Michael Fairbourne and then going on to an art gallery that specialized in paintings of ancient Egypt. There were increasingly many of those luncheons and consultations, of necessity. At each one Starr was beginning to wonder if, in seeking a panacea for one hurt, she might not be rushing headlong into another. Michael was utterly impersonal in all his dealings with her, but that had nothing to do with the quickening of Starr Ellison's own heart.

If only he weren't so virilely good looking, her role would be so much easier. For, try to put it from her all she could, knowing that never must her heart give a thrill of love for any man—especially for Michael Fairbourne whose heart was already given to another—she could not disguise from herself how quickly she was responding to the magic clearness of his gray eyes, his masterfulness, the strength of his tall, athletic figure which he carried with

the carelessness of being assured of himself. It was going to be hard, harder than she had thought. Bad enough to pretend to be such a she-devil as "Play-Girl," but with Michael-Hassan to complicate it—

"It's going to be some debut, Starr," Michael told her on the day the last of the furnishings came for her roof-top apartment and everything was in place. He stood staring at her with happy eyes glowing with that enthusiasm which was so much a part of him. "Some place, hey? It oughtn't to be hard to fit right into being a lady from Cairo with all this scenery, yes? Wait till some of the writing mob get an eyeful." He laughed. "They're already all hot and bothered about meeting 'Play-Girl' and these rumors about her being part Egyptian are the finishing touch. The office has done itself proud for your debut, and now it's up to you. . . . They have Pierre's ball room for the big event—no less—and all the moderns of the usual sort of smart set will be there. It's as I told you, Starr, all you've got to do is play up—Play!"

There was that far-away look in Starr's eyes as she smiled.

"You're going to be surprised, Michael-Hassan, how I will play!"

It was a small penthouse they had selected, overlooking the East River, but its long, low rooms were exquisite and ideal for their purpose. From the moment one stepped into the tiny hallway it was like stepping out of New York and precipitately into the East. Strange, tall perforated silver lamps stood all about, but it was the perfume that was the master touch—merely a suggestively lingering hint of perfume that spoke to one intimately, an aroma that caught one by the throat, made him instinctively remember the perfume of a loved woman's hair when the face is buried in it.

"Pretty swell, eh?" Michael asked, his eyes searching about. "But if you ask me, I'd say those windows are the chief deuce. Glad you remembered the name of that stuff, Starr."

Starr smiled. The windows were screened with mushrabyeh work. How could she ever forget that?

Though it seemed an eternity since she had wandered through those streets in far-off Egypt and seen window after window of that sort. She said:

"I'm glad you don't want me to wear a veil when I look out of them."

Starr's bedroom struck a more modern note. There were touches of Egypt there, too, notably in the pile of exquisite enamel antique necklaces and bracelets which were heaped in an open jewel box of her dressing table, but on the whole the apartment was equipped as the boudoir of any New York debutante, with its great bed of rose silk and silver, the tall mirrors, the pillow-gilt chaise longue and all the accoutrements necessary for aid in making a lovely woman all the more lovely.

Through the open bathroom door there came a glimpse of a sunken tiled bath. On the wall above it was painted a representation of an ancient Egyptian bathing beauties, disporting themselves in a lotus-decorated pool. A far cry from Mrs. Maloney's hall bedroom.

Odd that the first thing that Starr Ellison should do when Michael Fairbourne left her alone in her new home was to run to that great bed, sink her head back into its silk and silk pillows and cry, and cry, and cry.

Michael had done his preliminary work thoroughly. The Tarrance Publishing Company, too, had spread themselves, sparing no expense for their de luxe press stunt.

(To Be Continued)

Find Odd Fish

Has Head Like A Wildcat And Huge Curved Teeth

A deep sea fish with illuminated "port holes" was found recently at Capetown, South Africa. Known as "Astronotus Boulengeri," it is only the fourth of its kind known to science.

Tiny holes, brightly illuminated, are strung along the lower side of the body. The head of the fish is strikingly like a wildcat's. Huge teeth, like curved needles, protrude from the gaping mouth. In addition, there are two sets of external teeth ranging backward from the jaw.

While drilling on a prospective oil site near Kerques, Russia, experts were surprised when a natural gusher started spouting to a great height, and now is producing 8,000 tons of oil a day.

A breakfast of 8,000 flapjacks is the usual menu for the personnel of Ringling Brothers and Barnum and Bailey circus—take the word of Jerry, the chef. He has to feed 1,600 of them daily. 2169

Mr. CAFFEINE-NERVES . . . loses his grip!

New Kind Of Phone

Can Change Tone Of Human Voice And Performs Other Stunts

A new kind of telephone which mimics the human voice was demonstrated to the Harvard tercentenary at Cambridge, Mass.

It does more than a human being can do. It can change a woman's voice into a man's or bass into soprano. It can convert a single voice into a duet, either speech or song.

A bass singer could sound alike to persons simultaneously, one bass, the other soprano, tenor or any desired tone.

These stunts of the new electrical mimic were demonstrated by Dr. Frank Jewett, head of the Bell Telephone Laboratories. The phone is a new instrument, never shown before, and Dr. Jewett said it was invented not for telephoning but to study the voice.

Dr. Friedrich Bergius, German Nobel prize winner in chemistry, told how trees can be converted into sugar, fat and protein, the three main food requirements of human beings. An army might live ontrees under the processes described by Dr. Bergius.

The mimic telephone adds one part to an ordinary phone. This new part is big enough to cover one side of a room. It takes the electrical impulses that flow from an ordinary phone. It does not transmit them. Instead it analyzes them and then builds up a new voice in electricity.

This new mimicking electrical voice is then transmitted to a loud speaker or a receiver and heard in the ordinary manner.

Should Raise More Geese

The poultry experts of the Dominion experimental farm at Ottawa are of the opinion that farmers are not sufficiently into the business of raising geese. They point out that annually at Christmas there is a market shortage of geese, which assures a profitable price for that class of poultry. The advantageous circumstance about raising geese, is that the farm offers the ideal conditions, freedom of range and plentiful supply of green food.

Tags Come Back

Jack Miner, in a recent mail, heard from 76 of his missionary geese, which had been killed by Eskimos and Indians in the Arctic Circle. The tags, during the summer months, had been collected by Rev. Arnold C. Herbert, Anglican missionary at Port Harrison, Hudson Bay, which is near the 60th parallel of latitude. The tags were put on between 1925 and 1938.

Trade Revival In Britain

Number Of Unemployed Reaching Lowest Mark In Years

Great Britain now has a record industrial army. Exclusive of agricultural workers the number of persons employed totals 10,961,000, the highest known.

During the four weeks ended Aug. 24 the total number of unemployed fell by 38,132 to 1,613,940 or 334,024 fewer than a year ago. It also was the lowest figure in six years.

Trade revival is reflected from many angles. The biggest theatre season for seven years has begun in London.

A boom in apartment building has begun. In all the great centres of population huge blocks are rising with accommodation ranging from the modest small flat to the luxurious apartment. The small flat is popular, particularly with Mrs. Newby and the retired couple wishing to escape the responsibilities of a house.

Rare Orchid Blooms

An orchid plant believed to be one of the rarest in the world is blooming in the conservatory of Hubert Dalton at Rumson, New Jersey. The plant flowered for the first time with a total of 399 flowers on four spikes, each about three feet long. Two orchid experts inspected the plant and said that it was the only one of its type they had seen. The orchid is believed to be a native of the Molucca Islands and Malaya.

A lump of native copper weighing 762 pounds recently was found only six feet underground through prospecting work in the field of the West Siberian Gold Mining Trust.

Little Helps For This Week

And every man that hath this hope in him purifieth himself, even as He is pure. 1 John 3:3.

Only Thine own to Thee, To do our best, There is a time when we are not content to be such merchants or doctors or lawyers as we see on the dead level below it. Here is God, standing silently at the door all day long, God whispering to the soul that to be pure and true is to succeed in life, and whatever we get short of that will burn up like stubble though the whole world try to save it.

God hides some life in every soul. At some time in our life we feel a trembling longing to do some good thing. Life finds its noblest spring of excellence in this hidden impulse to do our best. There is a time when we are not content to be such merchants or doctors or lawyers as we see on the dead level below it. Here is God, standing silently at the door all day long, God whispering to the soul that to be pure and true is to succeed in life, and whatever we get short of that will burn up like stubble though the whole world try to save it.
